

Spike is a smart laser measurement solution for all types of government applications. With Spike, you can quickly measure the width, height and area of objects, such as buildings or other assets, simply by taking a photo from your smartphone or tablet. In addition, you can quickly and safely capture a target's location, your location, and a georeferenced image of the target. Data collected with Spike can be imported into GIS software. The Spike device and Spike mobile app transform your smartphone or tablet into a comprehensive geospatial measurement solution.

Cut Costs

Cut your field data acquisition costs. Capture remote GPS location and measurements during field surveys without ladders, bucket trucks or expensive GPS equipment.

Increase Productivity

Replace expensive and complicated GPS handheld devices with Spike and get more of your staff into the field. All it takes is one person to collect location and measurement data for a project, allowing you to grow your field data collection, inspection and reporting capacity. End user confidence is increased by using the photo documentation.

Save Time

Collect data faster with Spike, reducing your field collection and measurement time to minutes. Faster data collection time leads to faster turnaround for reports and analyses. Photos and measurements are stored in either the mobile app or Spike Cloud, and can be organized into files or remeasured. No return trips are needed for additional measurements.

Improve Reporting

With Spike, you can capture 5x more geospatial data than commercial smartphones and tablets. By capturing real-time measurements from a photo, including GPS location, distance, length and square footage, you can provide more accurate surveillance, inspection, reporting and analysis.

Safer Field Operations

Capture measurements with Spike from a safe location and distance. There is no need to access the object in order to take measurements. Simply stand at a safe distance, aim the Spike laser at the object you wish to measure, and take a photo from your smartphone or tablet.

Photo Measure: real-time measurements from a photo

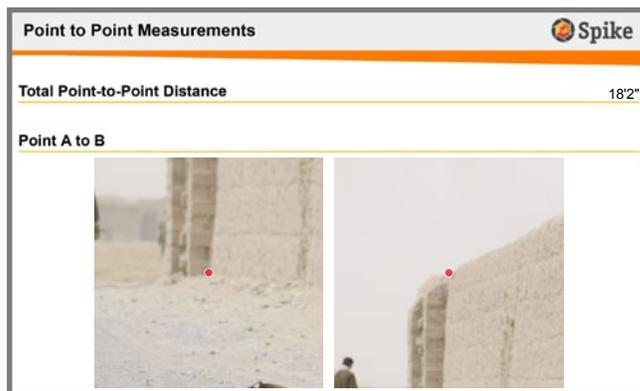

Once on-site, capture a photo of an object, such as a building, using your smartphone or tablet and Spike. Then, draw measurements on the photo, such as area, height, width, and length using the Spike mobile app or the Spike Cloud. These measurements can be used to determine building heights, and dimensions of windows and doors for urban tactical operations.

Capture a target's location, your location and a georeferenced image of the target

Point-to-Point: measure the distance between two points

Point-to-Point Measurements help you determine what size equipment you need for access, how much distance you need to cover or the dimensions of a landing zone. Aim Spike at an object, such as the base of a building, and take a photo. Then, aim and take a photo of your second object, such as adjacent ground cover. Spike will calculate the distance and slope between those two points.

Measure vertical and horizontal lengths using Point-to-Point Measurements

The Spike device pairs with your smartphone or tablet via Bluetooth. Spike's laser rangefinder works jointly with your smartphone or tablet's camera, GPS, compass and connection to the Internet.

Device and OS	Apple iOS & Google Android smartphones and tablets. For a list of supported devices, visit www.ikegps.com/support
Battery	Internal Li-ion Battery
Connectivity	BLUETOOTH 4.0 low energy technology
Range	6 - 650 Feet (2 - 200 Meters)
Accuracy	Point-to-Point: $\pm 3\%$ Photo Measure: $\pm 3\%$ (if positioned perpendicular to target)
Units	Feet, Inches, Meters, Centimeters
Output Formats	PDF, JPG, Spike File (XML), KMZ, URL

CLASS 1
